What's Your Can? Update 2019: 11  
Strategies for Living a Spectacular  
Life with a Chronic Condition  
Maribeth Slovasky 2019-11-25 A year  
has passed, and the story continues  
to unfold as the author continues her  
transformation from "living with a  
chronic condition" to "being on an  
expedition that keeps me believing in  
others and in myself." Regardless of  
what it is or how long you have had  
one, a chronic condition alters your  
life in many ways. When every action  
requires thought and planning, giving  
up sounds like a good option. There  
are solutions! What's Your Can? is  
author Maribeth Slovasky's story of  
her 40-year journey with a chronic  
condition. She takes you through the  
progression of her illness, sharing  
how her struggles nearly incited her  
yearning to resign herself to life  
with restrictions and constant  
concern regarding her wellbeing. She  
didn't quit. Even more so, a surreal

experience in Tacoma, Washington,  
presented Maribeth with a choice;  
become who you want to be or live  
behind the black wall, alone,  
declining, and unhappy. Follow Ms.  
Slovasky's journey as she revives her  
passion for writing. After meeting  
new friends and learning to trust  
again, she embarks on an expedition  
to become physically and emotionally  
healthier than she thought possible.  
This book is designed for those  
readers who struggle with a chronic  
or long-lasting condition and are  
ready to live the life they deserve.  
Her 11 lessons are practical, fun,  
and thought-provoking ideas to give  
even the long term sufferer the  
belief they have been seeking.  
Family, caregivers, and friends: this  
book will help you learn along with  
your loved one, finding new ways to  
be mindful, calm, and positive, even  
in your own life.

Karl Polanyi and the Contemporary  
Political Crisis Peadar Kirby  
2020-12-10 Has politics reached  
breaking point? Rather than defending  
liberalism or abandoning it, how can  
a socially just and ecological  
alternative be built? Peadar Kirby  
investigates the causes of our  
current multifaceted global crisis by  
drawing on the work of Karl Polanyi.  
This book explores Polanyi's theory  
that social disruptions result from  
the attempt to run society according  
to the rules of the market. Drawing  
on these ideas, it outlines pathways  
towards an alternative future that  
overcome weaknesses in Marxism.  
Linking the ecological, political and  
socio-economic crises, Kirby  
identifies that an alternative socio-  
ecological model is emerging,  
consistent with the insights of  
Polanyi. Karl Polanyi and the

Contemporary Political Crisis is an urgent intervention into key debates on the future of politics, on the low-carbon transition, on automation and on the emerging world order.

### **Freedom Fighters (2018-2019) #11**

Robert Venditti 2019-11-27 The final battle for the fate of Earth-X has begun, and the last charge of the Freedom Fighters is underway! The team may have bested the defenses of the Nazi stronghold of Cheyenne Mountain, but now our heroes must face off against the combined might of the newly reconstructed Cyborg Overman, the evil Plasstic Men, and the psychotic Hitler III! The odds are against the red, white, and blue, but Uncle Sam has a plan-don't miss this penultimate issue in the Freedom Fighters saga!

### **The Age of Surveillance Capitalism**

Shoshana Zuboff 2019-01-31 THE TOP 10 SUNDAY TIMES BESTSELLER Shortlisted for the FT Business Book of the Year Award 2019 'Easily the most important book to be published this century. I find it hard to take any young activist seriously who hasn't at least familiarised themselves with Zuboff's central ideas.' - Zadie Smith, The Guardian The challenges to humanity posed by the digital future, the first detailed examination of the unprecedented form of power called "surveillance capitalism," and the quest by powerful corporations to predict and control us. The heady optimism of the Internet's early days is gone. Technologies that were meant to liberate us have deepened inequality and stoked divisions. Tech companies gather our information online and sell it to the highest bidder, whether government or retailer. Profits now depend not only on predicting our behaviour but modifying it too. How will this

fusion of capitalism and the digital shape our values and define our future? Shoshana Zuboff shows that we are at a crossroads. We still have the power to decide what kind of world we want to live in, and what we decide now will shape the rest of the century. Our choices: allow technology to enrich the few and impoverish the many, or harness it and distribute its benefits. The Age of Surveillance Capitalism is a deeply-reasoned examination of the threat of unprecedented power free from democratic oversight. As it explores this new capitalism's impact on society, politics, business, and technology, it exposes the struggles that will decide both the next chapter of capitalism and the meaning of information civilization. Most critically, it shows how we can protect ourselves and our communities and ensure we are the masters of the digital rather than its slaves.

The AI Economy Roger Bootle

2019-09-05 'A well-researched, enjoyable and thoughtful book'. - Calum Chace, Forbes Extraordinary innovations in technology promise to transform the world, but how realistic is the claim that AI will change our lives? In this much needed

book the acclaimed economist Roger Bootle responds to the fascinating economic questions posed by the age of the robot, steering a path away from tech jargon and alarmism towards a rational explanation of the ways in which the AI revolution will affect us all. Tackling the implications of Artificial Intelligence on growth, productivity, inflation and the distribution of wealth and power, THE AI ECONOMY also examines coming changes to the the way we educate, work and spend our leisure time. A fundamentally optimistic view which will help you plan for changing times, this book explains AI and leads you towards a more certain future.

**Utopian Universities** Miles Taylor  
2020-11-12 In a remarkable decade of public investment in higher education, some 200 new university campuses were established worldwide between 1961 and 1970. This volume offers a comparative and connective global history of these institutions, illustrating how their establishment, intellectual output and pedagogical experimentation sheds light on the social and cultural topography of the long 1960s. With an impressive geographic coverage - using case

studies from Europe, the Americas, Africa and Asia - the book explores how these universities have influenced academic disciplines and pioneered new types of teaching, architectural design and student experience. From educational reform in West Germany to the establishment of new institutions with progressive, interdisciplinary curricula in the Commonwealth, the illuminating case studies of this volume demonstrate how these universities shared in a common cause: the embodiment of 'utopian' ideals of living, learning and governance. At a time when the role of higher education is fiercely debated, Utopian Universities is a timely and considered intervention that offers a wide-ranging, historical dimension to contemporary predicaments.

*Design and Development of Efficient Energy Systems* Suman Lata Tripathi

2021-04-13 There is not a single industry which will not be transformed by machine learning and Internet of Things (IoT). IoT and machine learning have altogether changed the technological scenario by letting the user monitor and control things based on the prediction made by machine learning algorithms. There has been substantial progress in the usage of platforms, technologies and applications that are based on these technologies. These breakthrough technologies affect not just the software perspective of the industry, but they cut across areas like smart cities, smart healthcare, smart retail, smart monitoring, control, and others. Because of these "game changers," governments, along with top companies around the world, are investing heavily in its research and development. Keeping pace with the latest trends, endless research, and new developments is paramount to innovate systems that are not only user-friendly but also speak to the

growing needs and demands of society. This volume is focused on saving energy at different levels of design and automation including the concept of machine learning automation and prediction modeling. It also deals with the design and analysis for IoT-enabled systems including energy saving aspects at different level of operation. The editors and contributors also cover the fundamental concepts of IoT and machine learning, including the latest research, technological developments, and practical applications. Valuable as a learning tool for beginners in this area as well as a daily reference for engineers and scientists working in the area of IoT and machine technology, this is a must-have for

any library.

**EIB Working Papers 2019/11 - Macro-based asset allocation** European Investment Bank 2020-02-14 Macro-based asset allocation is based on the identification of turning points in macro-financial cycles. This paper suggests that macro-based asset allocation informed by trends in continuous business and financial cycle indicators could be a promising alternative for medium- and long-term investment strategies. Despite changes during the last three decades, the most promising specifications of this approach did roughly anticipate turning points in asset price cycles, implying favourable returns and low portfolio volatility.
