Thank you categorically much for downloading 2019/12. Maybe you have knowledge that, people have look numerous time for their favorite books when this 2019/12, but stop happening in harmful downloads.

Rather than enjoying a good book considering a cup of coffee in the afternoon, otherwise they juggled as soon as some harmful virus inside their computer. 2019/12 is manageable in our digital library an online entry to it is set as public as a result you can download it instantly. Our digital library saves in compound countries, allowing you to get the most less latency era to download any of our books considering this one. Merely said, the 2019/12 is universally compatible when any devices to read.

Mastering AWS CloudFormation Karen Tovmasyan 2020-05-08 Build scalable and production-ready infrastructure in Amazon Web Services with CloudFormation Key Features Leverage AWS CloudFormation templates to manage your entire infrastructure Get up and running with writing your infrastructure as code and automating your environment Simplify infrastructure management and increase productivity with AWS CloudFormation Book Description DevOps and the cloud revolution have forced software engineers and operations teams to rethink how to manage infrastructures. With this AWS book, you'll understand how you can use Infrastructure as Code (IaC) to simplify IT operations and manage the modern cloud infrastructure effectively with AWS CloudFormation. This comprehensive guide will help you explore AWS CloudFormation from template structures through to developing complex and reusable infrastructure stacks. You'll then delve into validating templates, deploying stacks, and handling deployment failures. The book will also show you how to leverage AWS CodeBuild and CodePipeline to automate resource delivery and apply continuous integration and continuous delivery (CI/CD) practices to the stack. As you advance, you'll learn how to generate templates on the fly using macros and create resources outside AWS with custom resources. Finally, you'll improve the way you manage the modern cloud in AWS by extending CloudFormation using AWS serverless application model (SAM) and AWS cloud development kit (CDK). By the end of this book, you'll have mastered all the major AWS CloudFormation concepts and be able to simplify infrastructure management. What you will learn Understand modern approaches to IaC Develop universal and reusable CloudFormation templates Discover ways to apply continuous delivery with CloudFormation Implement IaC best practices for the AWS Cloud Provision massive applications across multiple regions and accounts Automate template generation and software provisioning for AWS Extend CloudFormation with custom resources and template macros Who this book is for If you are a developer who wants to learn how to write templates, a DevOps engineer interested in deployment and orchestration, or a solutions architect looking to understand the benefits of

managing infrastructure with ease, this book is for you. Prior understanding of the AWS Cloud is necessary.

Analyzing Financial Data and Implementing Financial Models Using R

Clifford S. Ang 2021-06-23 This advanced undergraduate/graduate textbook teaches students in finance and economics how to use R to analyse financial data and implement financial models. It demonstrates how to take publically available data and manipulate, implement models and generate outputs typical for particular analyses. A wide spectrum of timely and practical issues in financial modelling are covered including return and risk measurement, portfolio management, option pricing and fixed income analysis. This new edition updates and expands upon the existing material providing updated examples and new chapters on equities, simulation and trading strategies, including machine learning techniques. Select data sets are available online.

2019/12 184 2019-12-01 South Africa International Monetary Fund. African Dept. 2020-01-30 This

2019 Article IV Consultation with South Africa discusses that subdued private investment and exports, and increased uncertainty have depressed growth and worsened social indicators. State-owned enterprises' (SOEs) risks are materializing, triggering government bailouts of Eskom and administrative intervention in other entities. High fiscal deficits have boosted debt. Nonresident investors are shedding equities and local currency bonds but showing appetite for foreign currency sovereign bonds amid supportive global financing conditions. The external position is moderately weaker than implied by fundamentals and desirable policies. Inflation has slowed to around the mid-point of the target band, aided by one-off factors, but inflation expectations are higher. Banks are sound, albeit with pockets of vulnerabilities. In the absence of fiscal space, a gradual and growth-friendly fiscal consolidation and increased spending efficiency are needed. The authorities should establish a credible debt anchor to stabilize debt in the medium term. Given the structural nature of the growth slowdown, the consolidation should be accompanied by reforms that reduce the cost of doing business and boost private investment.

Mathematical Finance with Applications Wing-Keung Wong 2020-12-07

Mathematical finance plays a vital role in many fields within finance and provides the theories and tools that have been widely used in all areas of finance. Knowledge of mathematics, probability, and statistics is essential to develop finance theories and test their validity through the analysis of empirical, real-world data. For example, mathematics, probability, and statistics could help to develop pricing models for financial assets such as equities, bonds, currencies, and derivative securities.

Advanced Coatings for Corrosion Protection Wolfram Fürbeth 2021-01-15

Corrosion is a significant issue in many industrial fields. Among other strategies, coatings are by far the most important technology for corrosion protection of metallic surfaces. The Special Issue "Advanced Coatings for Corrosion Protection" has been launched as a means to present recent developments in any type of advanced coating for corrosion protection. This book compiles 15 contributions on metallic, inorganic, polymeric and nanoparticle enhanced coatings that provide corrosion protection as well as other functionalities.

Engineering Fluid Dynamics 2019-2020 Bjørn H. Hjertager 2021-02-25

This book contains the successful submissions to a Special Issue of Energies entitled "Engineering Fluid Dynamics 2019-2020". The topic of engineering fluid dynamics includes both experimental and computational studies. Of special interest were submissions from the fields of mechanical, chemical, marine, safety, and energy engineering. We welcomed original research articles and review articles. After one-and-a-half years, 59 papers were submitted and 31 were accepted for publication. The average processing time was about 41 days. The authors had the following geographical distribution: China (15); Korea (7); Japan (3); Norway (2); Sweden (2); Vietnam (2); Australia (1); Denmark (1);

Germany (1); Mexico (1); Poland (1); Saudi Arabia (1); USA (1); Serbia (1). Papers covered a wide range of topics including analysis of free-surface waves, bridge girders, gear boxes, hills, radiation heat transfer, spillways, turbulent flames, pipe flow, open channels, jets, combustion chambers, welding, sprinkler, slug flow, turbines, thermoelectric power generation, airfoils, bed formation, fires in tunnels, shell-and-tube heat exchangers, and pumps.

Biomass Processing for Biofuels, Bioenergy and Chemicals Wei-Hsin Chen

2020-05-23 Biomass can be used to produce renewable electricity, thermal energy, transportation fuels (biofuels), and high-value functional chemicals. As an energy source, biomass can be used either directly via combustion to produce heat or indirectly after it is converted to one of many forms of bioenergy and biofuel via thermochemical or biochemical pathways. The conversion of biomass can be achieved using various advanced methods, which are broadly classified into thermochemical conversion, biochemical conversion, electrochemical conversion, and so on. Advanced development technologies and processes are able to convert biomass into alternative energy sources in solid (e.g., charcoal, biochar, and RDF), liquid (biodiesel, algae biofuel, bioethanol, and pyrolysis and liquefaction bio-oils), and gaseous (e.g., biogas, syngas, and biohydrogen) forms. Because of the merits of biomass energy for environmental sustainability, biofuel and bioenergy technologies play a crucial role in renewable energy development and the replacement of chemicals by highly functional biomass. This book provides a comprehensive overview and in-depth technical research addressing recent progress in biomass conversion processes. It also covers studies on advanced techniques and methods for bioenergy and biofuel production.

Blade Runner 2019 #12 Michael Green 2020-11-18 Having successfully helped Cleo and her surrogate Replicant mother Isobel escape Off-world, Blade Runner Aahna Ashina, 'Ash', has returned to Los Angeles to hunt down business tycoon, Alexander Selwyn. While investigating a possible lead, Ash was apprehended by the LAPD, but before she could be taken into custody she was freed by members of the Replicant Resistances who spirited her away to a remote farmhouse where she met their leader, Freysa. While Freysa repaired Ash's damaged backbrace, the farmhouse was attacked by Selwyn's own personal Blade Runner, Hythe, who had

tracked Ash to the farmhouse following a tipoff. A gun battle broke out, giving Freysa and Ash time to escape back to the city. There, Freysa revealed that the Replicant Resistance had tracked down Selwyn's location. With her backbrace fully repaired, Ash set off back to Selwyn's Santa Barbara mansion, to find him waiting for her with a squad of Hythe Replicants...

Plasma Processes for Renewable Energy Technologies Masaaki Okubo 2020-01-07 The use of renewable energy is an effective solution for the prevention of global warming. On the other hand, environmental plasmas are one of powerful means to solve global environmental problems on nitrogen oxides, (NOx), sulfur oxides (SOx), particulate matter (PM), volatile organic compounds (VOC), and carbon dioxides (CO2) in the atmosphere. By combining both technologies, we can develop an extremely effective environmental improvement technology. Based on this background, a Special Issue of the journal *Energies* on plasma processes for renewable energy technologies is planned. On the issue, we focus on environment plasma technologies that can effectively utilize renewable electric energy sources, such as photovoltaic power generation, biofuel power generation, wind turbine power generation, etc. However, any latest research results on plasma environmental improvement processes are welcome for submission. We are looking, among others, for papers on the following technical subjects in which either plasma can use renewable energy sources or can be used for renewable energy technologies: · Plasma decomposition technology of harmful gases, such as the plasma denitrification method; · Plasma removal technology of harmful particles, such as electrostatic precipitation; · Plasma decomposition technology of harmful substances in liquid, such as gas-liquid interfacial plasma; · Plasma-enhanced flow induction and heat transfer enhancement technologies, such as ionic wind device and plasma actuator; · Plasma-enhanced combustion and fuel reforming; · Other environment plasma technologies.

Agility Leo M. Tilman 2019-10-15 As the Fourth Industrial Revolution

barrels forward and the pace of disruption accelerates, all organizations must operate with agility. But this urgent priority, now widely-accepted by senior leaders, presents a major challenge: In business, government, and warfare, agility is a buzzword. There is no common understanding of what it means, or of what it takes to be consistently agile. In this groundbreaking book, Leo Tilman and Charles Jacoby offer the first comprehensive assessment of the fundamental nature of organizational agility and then describe the essential leadership practices for achieving it. They show that agility is far superior to mere speed or adaptability. Pinpointing its distinctive features, they define agility as the ability to detect and assess changes in the competitive environment in real time and then take decisive action. They demonstrate that agility enables an organization to outmaneuver competitors by seizing opportunities; better defending against threats; and acting as a well-orchestrated collective of teams that are empowered to take disciplined initiative. Combining their personal experience of building and leading agile organizations, Tilman in the realm of business and finance and Jacoby in battlefield command and homeland security, they present a powerful approach to fostering agility up and down an organization, and out to its very edges. They show how to detect opportunities and threats by fighting for risk intelligence; how to pierce through complexity and unleash creativity by nurturing a culture of honesty and trust; how to meld top-down vision and planning with decentralized execution; and how to enhance strategy by recognizing organizations as dynamic portfolios of risk. In a world where leaders and their teams must brave the unknown and step confidently forward – or risk extinction – Agility provides a vital roadmap for seizing the unprecedented possibilities of the new age and dominating change instead of being dominated by it.

Representing Australian Aboriginal Music and Dance 1930-1970
Amanda Harris 2020-09-03 Shortlisted for the 2021 Prime Minister's
Literary Award for Australian History. Representing Australian Aboriginal
Music and Dance 1930-1970 offers a rethinking of recent Australian music
history. Amanda Harris presents accounts of Aboriginal music and dance
by Aboriginal performers on public stages. Harris also historicizes the
practices of non-Indigenous art music composers evoking Aboriginal music
in their works, placing this in the context of emerging cultural institutions
and policy frameworks. Centralizing auditory worlds and audio-visual
evidence, Harris shows the direct relationship between the limits on
Aboriginal people's mobility and non-Indigenous representations of
Aboriginal culture. This book seeks to listen to Aboriginal accounts of
disruption and continuation of Aboriginal cultural practices and features
contributions from Aboriginal scholars Shannon Foster, Tiriki Onus and
Nardi Simpson as personal interpretations of their family and community
histories. Contextualizing recent music and dance practices in broader
histories of policy, settler colonial structures, and postcolonizing efforts, the
book offers a new lens on the development of Australian musical cultures.

**A review of the application of the FAO ecosystem approach to fisheries
(EAF) management within the areas beyond national jurisdiction (ABNJ)**

Fletcher, W.J. 2020-10-14 The publication documents the results of the
review of the level of implementation of the FAO Ecosystem Approach to
Fisheries (EAF) by the fisheries management bodies in each of the
different ABNJ regions. The review was designed to help identify future
activities by the ABNJ Deep Sea Project to address gaps and capacity
development and make recommendations to strengthen EAF among deep-
sea fisheries management bodies and/or their members. The information
to complete the EAF reviews was largely obtained from web-based
materials. To assist with the accuracy of these desktop assessments,
following initial drafting of each EAF background report and associated
EAF assessment, both documents were sent to the respective RFMO
secretariats. Comments and/or suggestions provided by the secretariats
were then addressed with revised versions of the background reports and
review assessments generated. Based on these revised reports, the
comparative analyses were finalized and a full report was drafted. Being a
desk-top assessment of the level of implementation of the EAF approach
by each of the RFMO management bodies, the study had a number of
caveats including only being able to measure systems and processes, not
outcomes. A more complete assessment of EAF adoption and especially
the outcomes would require direct involvement of the various stakeholders,
including all relevant management, compliance and scientific bodies,
contracting parties (CP), non-contracting parties (NCP), vessel owners,
crews, non-governmental organizations (NGOs), etc.

Analysis for Power Quality Monitoring Juan-José González de la Rosa
2020-05-22 We are immersed in the so-called digital energy network, continuously introducing new technological advances for a better way of life. Numerous emerging words are in the spotlight, namely: Internet of Things (IoT), Big Data, Smart Cities, Smart Grid, Industry 4.0, etc. To achieve this formidable goal, systems should work more efficiently, and this fact inevitably leads to power quality (PQ) assurance. Apart from its economic losses, a bad PQ implies serious risks for machines, and consequently for people. Many researchers are endeavoring to develop new analysis techniques, instruments, measurement methods, and new indices and norms that match and fulfil the requirements regarding the current operation of the electrical network. This book offers a compilation of the some recent advances in this field. The chapters range from computing issues to technological implementations, going through event detection strategies and new indices and measurement methods that contribute significantly to the advancement of PQ analysis. Experiments have been developed within the frames of research units and projects, and deal with real data from industry and public buildings. Human beings have an unavoidable commitment with sustainability, which implies adapting PQ monitoring techniques to our dynamic world, defining a digital and smart concept of quality for electricity.

Design and Development of Efficient Energy Systems Suman Lata Tripathi
2021-03-16 There is not a single industry which will not be transformed by machine learning and Internet of Things (IoT). IoT and machine learning have altogether changed the technological scenario by letting the user monitor and control things based on the prediction made by machine learning algorithms. There has been substantial progress in the usage of platforms, technologies and applications that are based on these technologies. These breakthrough technologies affect not just the software perspective of the industry, but they cut across areas like smart cities, smart healthcare, smart retail, smart monitoring, control, and others. Because of these “game changers,” governments, along with top companies around the world, are investing heavily in its research and development. Keeping pace with the latest trends, endless research, and new developments is paramount to innovate systems that are not only user-friendly but also speak to the growing needs and demands of society. This volume is focused on saving energy at different levels of design and automation including the concept of machine learning automation and prediction modeling. It also deals with the design and analysis for IoT-enabled systems including energy saving aspects at different level of operation. The editors and contributors also cover the fundamental concepts of IoT and machine learning, including the latest research, technological developments, and practical applications. Valuable as a learning tool for beginners in this area as well as a daily reference for engineers and scientists working in the area of IoT and machine

technology, this is a must-have for any library.

Organizing the 20th-Century World Karen Gram-Skjoldager 2020-11-12
International Organizations play a pivotal role on the modern global stage and have done, this book argues, since the beginning of the 20th century. This volume offers the first historical exploration into the formative years of international public administrations, covering the birth of the League of Nations and the emergence of the second generation that still shape international politics today such as the UN, NATO and OECD. Centring on Europe, where the multilateralization of international relations played out more intensely in the mid-20th century than in other parts of the world, it demonstrates a broad range of historiographical and methodological approaches to institutions in international history. The book argues that after several 'turns' (cultural, linguistic, material, transnational), international history is now better equipped to restate its core questions of policy and power with a view to their institutional dimensions. Making use of new approaches in the field, this book develops an understanding of the specific powers and roles of IO-administrations by delving into their institutional make-up.

Short-Term Load Forecasting 2019 Antonio Gabaldón 2021-02-26 Short-term load forecasting (STLF) plays a key role in the formulation of economic, reliable, and secure operating strategies (planning, scheduling, maintenance, and control processes, among others) for a power system and will be significant in the future. However, there is still much to do in these research areas. The deployment of enabling technologies (e.g., smart meters) has made high-granularity data available for many customer segments and to approach many issues, for instance, to make forecasting tasks feasible at several demand aggregation levels. The first challenge is the improvement of STLF models and their performance at new aggregation levels. Moreover, the mix of renewables in the power system, and the necessity to include more flexibility through demand response initiatives have introduced greater uncertainties, which means new challenges for STLF in a more dynamic power system in the 2030–50 horizon. Many techniques have been proposed and applied for STLF, including traditional statistical models and AI techniques. Besides, distribution planning needs, as well as grid modernization, have initiated the development of hierarchical load forecasting. Analogously, the need to face new sources of uncertainty in the power system is giving more importance to probabilistic load forecasting. This Special Issue deals with both fundamental research and practical application research on STLF methodologies to face the challenges of a more distributed and customer-

centered power system.

Special Issue of the Manufacturing Engineering Society 2019

(SIMES-2019) Eva M. Rubio 2020-07-03 This book derives from the Special Issue of the Manufacturing Engineering Society 2019 (SIMES-2019) that has been launched as a joint issue of the journals Materials and Applied Sciences. The 29 contributions published in this Special Issue of Materials present cutting-edge advances in the field of manufacturing engineering focusing on additive manufacturing and 3D printing; advances and innovations in manufacturing processes; sustainable and green manufacturing; manufacturing of new materials; metrology and quality in manufacturing; industry 4.0; design, modeling, and simulation in manufacturing engineering; and manufacturing engineering and society. Among them, the topic "Additive Manufacturing and 3D Printing" has attracted a large number of contributions in this journal due to its widespread popularity and potential.

The Tweets of President Donald J. Trump Forefront Books 2020-07-28

Love them or hate them, the tweets of President Donald J. Trump rule the Twitterverse. Until our last presidential campaign, television, particularly campaign ads, dominated the political landscape. But with the rise of Donald J. Trump came a new political tool: the internet. Trump used this to communicate instantly and very effectively with the American people. And it worked. Establishing his political positions by tweeting numerous times a day, Trump pulled a major upset by defeating Hillary Rodham Clinton to become the 45th president of the United States. Once in office, Trump did not abandon his penchant for using Twitter as his populist platform. Instead, he doubled down on it, making it his primary means of communicating with the American people. Knowing how effective a tweet can be, Trump once wrote, "Boom. I press it and within two seconds we have breaking news." With a massive Twitter following of 78 million by the spring of 2020, Trump's direct impact upon Americans cannot be

dismissed, nor can the value of his tweets as an essential part of the historical record be denied. To put the enormous impact of his tweets into perspective, Trump won the White House with 63 million votes—a number significantly lower than his massive Twitter following. Now you can read the collected tweets of wisdom—or ridiculousness—from President Donald J. Trump, from his inauguration through February 2020 in this historically significant collection.

Approaches, Advances and Applications in Sustainable Development of Smart Cities Tan Yigitcanlar 2020-04-03 This book aims to contribute to the conceptual and practical knowledge pools in order to improve the research and practice on the sustainable development of smart cities by bringing an informed understanding of the subject to scholars, policymakers, and practitioners. This book seeks articles offering insights into the sustainable development of smart cities by providing in-depth conceptual analyses and detailed case study descriptions and empirical investigations. This way, the book will form a repository of relevant information, material, and knowledge to support research, policymaking, practice, and transferability of experiences to address aforementioned challenges. The scope of the book includes the following broad areas, with a particular focus on the approaches, advances, and applications in the sustainable development of smart cities: • Theoretical underpinnings and analytical and policy frameworks; • Methodological approaches for the evaluation of smart and sustainable cities; • Technological developments in the techno-enviro nexus; • Global best practice smart city case investigations and reports; • Geo-design and applications concerning desired urban outcomes; • Prospects, implications, and impacts concerning the future of smart and sustainable cities.
